Doctor Portal Management System

Project Overview

- The Doctor Portal Management System is a Java-based web application developed using Spring MVC, JSP, JDBC, and MySQL. It allows users to manage doctor information through a simple and user-friendly interface.
- The application supports registering new doctors, viewing registered doctor details, searching for doctors using their ID, updating existing records, and deleting doctor records.

Technologies Used

- ✓ Programming Language: Java
- ✓ Framework: Spring MVC
- ✓ Frontend: JSP, HTML, CSS, JavaScript
- ✓ Database: MySQL
- ✓ Database Connectivity: Spring JDBC (JdbcTemplate)
- ✓ Server: Apache Tomcat 11
- ✓ IDE: Eclipse IDE
- ✓ Build Tool: Maven

Features

- Home Page
  - Welcome page with navigation options.
  - Register Doctor and View Doctors buttons.
- Doctor Registration
  - Register doctors with personal and professional details.
  - Capture doctor name, age, mobile number, gender, consultation fee, hospital name, department, availability, and shift.
- View Doctors
  - Display all registered doctors in a table.
  - Search for a doctor using Doctor ID.
- Update Doctor
  - Retrieve existing doctor details.
  - Modify and save updated information.
- Delete Doctor
  - Delete doctor records from the database.
  - Confirmation popup before deletion.

Project Workflow

- ✓ The application follows the Spring MVC architecture:
- ✓ The user accesses the Home Page.
- ✓ The user selects Register Doctor or View Doctors.
- ✓ Spring MVC Controller receives the request.
- ✓ The Controller communicates with the DoctorDAO.
- ✓ DoctorDAO performs database operations using JdbcTemplate.
- ✓ MySQL stores and retrieves doctor information.
- ✓ The result is displayed through JSP pages.
